Work Experience

Software Engineer @ Freshworks

2018 - Present

- Work closely with Product Managers, UX Designers, and other Software Engineers to Design, Build, and ship High-Quality Product features that solve business problems.
- Developed internal Admin tools to Query and Visualize the data for non-engineers.
- Reduced build times in CI Pipelines by reducing the installation time of the modules.
- Refactored the existing source code to apply Framework specific best practices that improved the predictability of the Application.
- Improved the overall performance of the Application by restricting critical background tasks when the Application is inactive.

Software Engineer @ Mindtree

2018

- Took ownership to develop an Entire Application for P&G without a deadline breach.
- Collaborated with UX Designer to create a seamless User Experience of the Product.
- Involved in Decision making of Tech Stack for the Application.
- Minimized the number of calls to external APIs by caching the least frequently changed data in Local DB.
- Fixed Memory leaks in Serverless App that caused performance degradation under High loads.

Web Developer @ Concentrix Technologies

2016 - 2018

- Create Responsive and Performant webpages for Samsung.
- Efficiently retrieve data from backend APIs.
- Write well designed, tested, and performant code with JS best practices.
